

### 1) Device Setup

- Device specific setup information can be accessed simply by clicking anywhere on the device. For example to access the treater information click right on the treater.

- The setup for the scale, conveyors, gates and pumps are accessed this same way

**KSi CONVEYORS INC**

---

---

---

---

---

---

---

---

### 2) Seed Source Setup – a) From KSi AutoData

- Supplier (not required)
- Seed Kind (not required)
- Seed Variety (required)
- Seed Lot (required)

**KSi CONVEYORS INC**

---

---

---

---

---

---

---

---

### 2) Seed Source Setup – a) From KSi AutoData

- Add Seed Sources (required)

**KSi CONVEYORS INC**

---

---

---

---

---

---

---

---

### 2) Seed Source Setup – b) From Touch Screen

1. Go to Tank Page for desired tank
2. Click on the tank anywhere to bring up Tank Setup Parameters (if this information has been entered in the database these fields will already be populated)

3. Enter parameters and then exit
  - a) The parameters are automatically saved back to the database

---

---

---

---

---

---

---

---

### 3) Customer Setup – a) From KSi AutoData

- Add Customers Individually

---

---

---

---

---

---

---

---

### 3) Customer Setup – a) From KSi AutoData (Import)

- Select the "Customers" menu and then "Show Customers".
- Select the Import Data Icon, .
- In the import wizard that opens, browse to the file that contains the customer data that you want to import from. Then, select the appropriate file type.
- Once the data has been imported into KSi AutoData, you will need to assign the columns to their respective field. Check the "Import" option above each column that you wish to import. Each imported column needs to be assigned a destination field as well.
- The Operation and Account are the only fields that are required when importing customers. Example:
  - If the file you are importing does not have an Account and an Operation name you will need to copy and paste all the accounts in to the operation column
- When you are finished assigning all the columns select "Import".

---

---

---

---

---

---

---

---

### 3) Customer Setup – b) From KSi AutoData

1. Go to Home Page
2. Click on Manage Customer

3. Enter customer information and then either Save (edit existing customer) or Save As (save as a new customer) – This saves the customer back to the database
  - a) Select the green check to exit

---

---

---

---

---

---

---

---

---

---

### 4) Setup Pick Up Orders – From KSi AutoData

- Add New Pick Up Orders
- These are orders entered in advance and can be called up from the touch screen

---

---

---

---

---

---

---

---

---

---

### 5) Run AutoSet for Each Tank

- This will set the Preact, Discharge Rate and Cleanout time for each tank

---

---

---

---

---

---

---

---

---

---

**6) Setup Order – a) Load Order from Database**

1. Go to Home Page
2. Enter Order Number or Order Name and click Search

3. All the order information will populate from the database
4. Changes can be made to the Order/Customer/Recipe and the click Save (edits existing order)

KSI CONVEYORS INC

---

---

---

---

---

---

---

---

**6) Setup Order – b) Create New Order from Touch Screen**

1. Select Manage Order

2. Enter Order Information (Including toggling job specific options on bottom of window on/off)
  - a) Select the green check to exit

KSI CONVEYORS INC

---

---

---

---

---

---

---

---

**6) Setup Order – b) Create New Order from Touch Screen**

3. Select Customer
  - a) Search for customer or enter new customer and then select green check mark to select customer

3. Select Recipe
  - a) Search for recipe or enter new recipe and then select green check mark to select customer

KSI CONVEYORS INC

---

---

---

---

---

---

---

---

**6) Setup Order – b) Create New Order from Touch Screen**

- Red dots by the Order, Customer or Recipe indicate that the order needs to be saved back to the database (when any of these lights are red, the system will not let the job start)

**3. Save Order**

- Push Save As (save new order to save as a new order)
- Order will save to the database and the three dots will turn green letting you know the job is ready to be started

CONVEYORS INC

---

---

---

---

---

---

---

---

---

---

---

---

**7) Run Job**

- Push Master Start
- Enable Bin

- Scale fill conveyors will start and bin gate will open
- Scale will fill to desired weight
- Conveyors will turn off
- With Auto Discharge off, the treator fill conveyor and the treator load out conveyor will wait to start until these conveyors are started from the load out page.

Once Master Start is pressed and Tank is enabled, you can navigate to System Status Screen for a system overview while the job runs

CONVEYORS INC

---

---

---

---

---

---

---

---

---

---

---

---

**7) Run Job**

- Once a drum signal is received the treator fill conveyor will start and scale gate will open to move seed to treator inlet hopper.
- Once scale is empty and the last batch for the order is complete, the load out conveyors can be turned off (from the load out page) once the load out conveyor is cleaned out.

CONVEYORS INC

---

---

---

---

---

---

---

---

---

---

---

---

### 7) Run Job – c) Job Complete

- Once the last batch for the job has been treated, the treater will begin to cleanout for the final time
  - Drum will shut down and then run in reverse for a preset amount of time
  - The load out conveyors will run for a preset amount of time and the shut down ( assuming Auto Discharge is enabled)

---

---

---

---

---

---

---

---

### 7) Run Job – d) Print Ticket

- Once the AutoBatch and AutoTreat is complete return to Home Screen and Master Print
- Ticket is printed and transaction is recorded to the database
- For next order, repeat steps 6-7

---

---

---

---

---

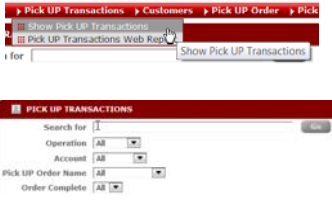

---

---

---

### 8) View all Past Transactions from KSi AutoData

- View Pick Up Transaction Report in KSi AutoData
